

Ebru Ekici Güngör is a Computer Engineer and Nuclear Regulatory Specialist at the Turkish Nuclear Regulatory Authority (NDK). She received her B.Sc. degree in Computer Engineering from Sakarya University in 2009 and started her M.Sc. degree in Smart Grids at Gazi University in 2026. She previously served as a Research Assistant at Maltepe University and as a Computer Engineer at the Turkish Police IT Department.

Since 2015, she has performed regulatory review, inspection, and oversight activities related to safety-critical digital instrumentation and control (I&C) systems for nuclear facilities. Her work includes independent regulatory compliance assessments against IEC 61513, IEC 60880, IEC 62138, IEC 61226, and IAEA safety standards; evaluation of I&C design documents, safety analysis reports, cybersecurity documentation, technical assignments, manufacturer notices, and commissioning test procedures and results; and contributions to licensing and operational oversight decision-making. She has participated in national and international technical meetings, workshops, inspections, and training programs on nuclear I&C systems, regulatory inspections, nuclear safety, digital I&C technologies, and software-based safety systems. Her academic interests include smart grid communication systems, nuclear power plant-grid interfaces, small modular reactors, ancillary services, and cybersecurity in safety-critical energy infrastructures.
